8 SIMPLE STEPS:

Read through all the assembly instructions before starting to assemble the print.

- 1.** Begin by cutting with scissors along the perforated line on the canvas. Place the canvas with the motif face down on a smooth surface
- 2.** Place the sections of frame with tape face down with the backing paper still in place. Lock the sections of frame together and adjust the frame proportions by inserting the tensioning wedges in the grooves at the plastic corners.

- 3.** Leaving the backing paper in place, place the frame in the middle of the canvasprint. Use the scissors to make a diagonal cut at each corner to within 2 mm of where the plastic corners meet.

- 4.** Remove the backing paper from the tape on each section of frame and position the frame in the middle of the canvasprint.

- 5.** Fold each corner of the canvasprint towards the tape as firmly as possible.

- 6.** Remove the tensioning wedges and fold the sections of frame towards one another.

- 7.** Lock the sections of frame in place by inserting the corner clips into the holes at the corners.

- 8.** Finally attach the tensioning wedges to strengthen the frame and tension the canvas.

Contents:

1. 4 x Aluminium sections of frame
2. 4 x Tensioning wedges
3. 4 x Corner clips
4. 2 x Fixings for hanging
